# Q-TRENCH SOLUTION

THE EDGE TO GET AHEAD

Quanta Services' exclusive Q-Trench Solution cuts and vacuums a trench less than one-inch wide and no deeper than one foot – all in one pass.

The trench is then sealed with a custom, environmentally safe grout that is immune to the erosion and weathering common with other backfill solutions.

The result – less expensive, faster and greener fiber deployment projects. And what's more, the Q-Trench Solution minimizes disruption to the community.

Quanta's process is the next generation solution for next generation networks.

Quick. Quality. Quanta.
